PROJECTS

One O One Project

- In this project we automate the process through which manager can schedule the monthly/quarterly meetings with the individual team member and can give feedback or action items in this tool.

Pre Enrollment Modeler

- In this project we automate the process of showing Health Plan to the Employees. In this modeler there are some inputs based on which we show the different pricing plans from which they can choose the best option.

Venus Remedies Limited Web Application

- This project is for Venus Remedies Limited (www.venusremedies.com). This Web Application showcases the Products, Spotlight (Magazines, Newspapers) of the company. This website includes History, Awards and Global presence of the company. There is one Collaboration portal through which anyone can collaborate with the company in the desired field.

Career Portal for VRL

- In this project, we automated the process of hiring employees. I worked on admin section that includes job posting, candidate search, job responses according to the profile, status and vacancies. There is a Admin Panel for Hr person they can post job, see job response from this.

SpineBMS Startup (ERP - HR Module)

- It is a Java based project used to manage Employees data (Attendance, Leave, Salary) in an organization. The project is divided into three parts Master (one-time entry), Transaction (daily basis entry) and Reports (monthly and annually). HR can easily generate salary slip at end of every month with a full record of leaves of every employee with one click button.
